MAKING SENSE OF THE MODERN CLASSROOM

The classroom of today is different from the classroom of 5 years ago and very different to the classroom of 10 years ago. Demands have changed due to the different types of student we have together with different types of teaching practices. Some of these demands have included the introduction of technology, most notably the interactive whiteboard.

What are interactive whiteboards, how do we use them, how can they improve the teaching situation, what are the advantages (and disadvantages)? These are just some of the questions that we will try and answer during this hands-on teacher training session, allowing teachers to see for themselves a lesson using an interactive whiteboard.

The session will include the use of digital books, how to make the best use of interactive resources available to teachers and other activities.
